

Launch of the STUNNING Renovation Hub: EU platform for energy-efficient refurbishment technologies and business models

The EU-funded, Horizon 2020 project STUNNING, which promotes the accelerated adoption of successful business models for energy-efficient building refurbishments, launched the STUNNING Renovation Hub in September 2018. It is a virtual platform for interactive knowledge exchange and enables all participating stakeholders to share knowledge and experiences through accessing and submitting articles on their innovative refurbishment packages, replicable business models and case studies on the successful implementation of their energy-efficient refurbishment.

- The Renovation Hub gathers a diverse stakeholder community, ranging from companies and research institutes from construction, new materials, energy and smart home, but also other actors in the renovation value chain such as architects, property developers, financial institutions, building owners and municipalities. By

launching the Renovation Hub, STUNNING is thus promoting an accelerated adoption of innovative models for the energy-efficient refurbishment of buildings, thereby positively impacting the development of Smart Cities & Smart Grids and increasing the pan-European refurbishment rate.

Interested parties can now officially [register here](#) as STUNNING stakeholders with following degrees of participation:

- STUNNING Follower: Follow our social media activities, receive the newsletter and access to publicly available information from the Renovation Hub.
- STUNNING Expert: Get the possibility to submit your own articles, validate articles from other stakeholders and participate in our workshops.
- STUNNING Ambassador: Play a leading role in the validation of articles and disseminate information to your community.

For further information please visit our [STUNNING project website](#) and the newly launched site of the [Renovation Hub](#).
